

Utility Test Pit and Field Survey Notice

Anderson Avenue Sidewalk Project

Work to Begin Week of March 13

Project Description: In preparation for construction of the new sidewalk on the east side of Avery Road, the City's contractor will collect field survey data and complete utility test holes along the Anderson Avenue project corridor. These tasks will provide information about the elevation and location of underground water, sewer and gas utilities, which will allow for the completion of the sidewalk and storm drain design. All test holes will be located within the City right-of-way. For some locations, the test holes will require traffic control with flaggers and temporary lane closures. Please use caution and be aware of the signage and flaggers when traveling through the corridor. All work that involves temporary lane closures will be conducted weekdays between 9 a.m. and 3:30 p.m. Contact the City staff below with questions. The City appreciates your cooperation and patience through this process.

Location: Avery Road between MD 28 and 14701 Avery Road.

Purpose: This field work is necessary to complete design of a new storm drain system and identify possible conflicts with underground utilities. Once complete, this sidewalk project will improve pedestrian safety, accessibility and connectivity.

Timeline: The week of Monday, Mar., 13, weather permitting, and lasting for a period of approximately three weeks. City staff will send notifications to all homeowners at least two weeks prior to the start of construction later this spring.

Cost: Not to exceed \$40,690.18.
